Summary

I'm an experienced software architect with practical, hands-on expertise in application development as well as software delivery and cloud architecture. I have over 22 years experience in all phases of planning, design, implementation and delivery of a broad range of software solutions/products. I have lead teams and spearheaded all manner of strategic initiatives in enterprises both large and small, spanning many industries including finance, banking, logistics, media and government.

Software Projects

USPTO CPC-IP: A Spring MVC/ReST application for managing patent classification and search for various cooperating governments. It uses SAML Single sign-on, AWS, Oracle, Spring, Alfresco's Activiti, JPA, Lucene, and XSLT. The application manages multiple complex data transformations throughout the classification modification lifecycle.

Wholesale Payroll: NodeJs and Typescript application using a VueJS front end and Typescript ReST backend. This backend relied on Auth0 identity management and Prisma 2 database layer.

MSAPG: Completely multi-tenant payment gateway with support for extensible processors and transaction billing that is completely decoupled from the payment engine. AMQP/RabbitMQ provides the message queues/exchanges for decoupling event handling from the restful service API.

Sanddollar: A business intelligence software application to facilitate the management of impaired assets. Sanddollar featured a JBoss Drools rules engine, a restful service architecture built on Spring Roo stubs, an integrated job engine based on Quartz and an integrated reporting engine based on Jasper Reports.

PSS Ecom: An E-commerce platform, supporting nearly all of the PSS sales transactions over the web (2 Billion dollars annually). Components include sales quotes supported by multiple pricing engines, an integrated CMS application, shopping cart, catalog and order history tracking.

FSP 4: A Spring MVC application for managing logistic and invoice related information for multiple clients of a small transportation consulting firm. Clients include several Fortune 500 companies. Features include, XML and JSON based restful web services, EDI translator, embedded job engine, Groovy script support and an enterprise embedded reporting engine based on Jasper Reports.

Chronos: A highly scalable enterprise job scheduler, featuring clustered/load-balanced job servers with an Adobe Flex front end. The scheduler component is based on the Quartz API. The ORM was written in Groovy. The service layer is RMI and the encryption (PGP) layer was based on Bouncy Castle's PGP library with support for possibly swapping it or extending it with other encryption libraries.

ABBI: A high volume (36,000 per hour per server) check batching/balancing tool used for collecting paper checks, ICR'ing them and generating ACH transactions all without ever 'depositing' the physical checks at a bank. The web services are implemented as AXIS (SOAP 1.1) web services. The ORM layer was written in Hibernate and the Web layer is Servlets/JSPs. The external ICR engine is exposed via Windows COM objects that my Java application communicates with via the JaCoB library.

Focus Skills

Software Engineering:

- Java/JEE
- Spring MVC + Spring Security + Spring Data
- Groovy (both with Grails and without)
- Quartz Enterprise Scheduler
- AWS Lambda
- Python
- javascript/JQuery/AngularJS/NodeJS/Typescript
- Hibernate/JPA/Spring Data
- Web Services (REST/SOAP/raw text over TCPIP)
- Enterprise build tools (Maven/Gradle/Ant)
- Mobile application development (Android and iOS)

Software Engineering:

- Business process modeling/orchestration
- Business Intelligence/Analytics/Data Mining
- Service Oriented Architecture
- Cloud architecture design and management
- Database/Data Model design and implementation (both Relational and NoSQL)
- Automation and shell scripting
- Systems design, analysis and performance tuning
- Micro-services
- Agile Software Development Methodologies (Scrum)

Professional Experience

Sr Java Engineer/Architect, United States Patent and Trade Office (May 2015 - Current)
Mentored a team of senior Java developers, designed and provided reference implementations for other developers and contributed to daily development activities to support the product feature delivery.

USPTO CPC-IP:	JEE, AWS, SAML, Alfresco Activiti Workflow Engine, ReST, JPA, Lucene, XML, JSON transformations	2015 - Current
PStar:	JEE, Spring Batch, AWS, ReST	2019 - 2020

Services Engineer, Wholesale Payroll (Oct 2021 - Sept 2022)
Implemented ReST services including Identity Management integration and database abstraction features.

Wholesale Payroll:	NodeJS/Typescript, PrismaDB, OAuth 2.0, OpenID Connect, ReST, AngularJS, Docker	2021 - 2022

Application Architect, Clearsense (June 2018 - January 2019)
Strategic enterprise goals to evaluate and provide reference implementations for new technologies and document how to integrate them into the organization's existing technologies.

Gluu IDM Implementation:	Python, SAMl, OpenID Connect	2018 - 2019
Archive OpenID implementation:	OAuth, OpenID Connect, pac4j, spring security	2018 - 2019

Senior Java Architect, Payspan (May 2013 - Nov 2016)
Modernizied and integrated a newly acquired product with my company's main business channel. Daily duties included reading, writing and implementing specifications. Strict adherence to the Scrum process and ReST application design and implementation.

MSAPG:	JEE, Spring MVC, JPA, ReST, AMQP/RabbitMQ	2014 - 2016
MPay:	JEE, Servlets, Spring, Hibernate, JQuery	2013 - 2016

Web Architecture Consultant, PSS World Medical (May 2012 - May 2013)
Designed, prototyped and documented several architectural improvements within the ECOM platform. Also responsible for integrating prototypes into regular application releases.

ECOM:	Struts, Proprietary Data Access Layer, Dieselpoint Search Index, Spring	2012 - 2013
Inboundcal:	Grails, jQuery, Full Calendar JS, GORM	2012 - 2013

Enterprise Software Engineer, Everbank (June 2007 - May 2012)
Lead developer on Lockdesk, Eticket, UFT, Chronos, and FMEL. Responsibilities included gathering specs, prioritizing tasks, organizing releases, designing and implementing solutions and refactoring the legacy application code base.

Lockdesk:	Struts (later replaced with Spring MVC), hibernate, Axis (SOAP 1.1) web services, Quartz	2008 - 2011
FMEL:	Grails (including GORM and related Grails plugins)	2010 - 2012
Chronos:	Flex, Quartz, Groovy	2011 - 2012

Enterprise Software Engineer, ITX Labs (May 2007 - present)
Lead developer and architect on ABBI, FSP4, ICRWeb, Edocs, Salefish/Recon and Sanddollar. Responsibilities included gathering specs, prioritizing tasks, planning and organizing releases, managing a small development team, strategic corporate planning, and designing and implementing solutions.

ABBI:	Spring, JEE servlets, JSP 2.0, Hibernate, Axis (SOAP 1.1) web services, Quartz	2007 - present
ICR Web:	JEE, Hibernate, Axis (SOAP 1.1) web services, Java/Com Bridge	2008
EDocs:	Struts/Spring MVC, JPA, Spring Security	2010
Sanddollar:	Spring MVC, JPA/Hibernate, Spring Security, Jasper Reports	2010 - 2012
FSP4:	Spring MVC, JPA/Hibernate, Spring Security, Jasper Reports, Quartz	2011 - present

Enterprise Software Engineer, FDI Technologies/Jax Trans Services (March 2002 - June 2007)
Lead developer on FSP3, Com Manager. Responsibilities included prioritizing tasks, planning and designing and implementing solutions. Main technologies included PHP, Theos Multiuser Basic and Java.

Certifications and Education:	• AWS Certified Developer (Associate) - 2020 • Information Science, Associates of Arts from University of North Florida - 2004
